AUGMANITAI · ANDREAS EHSTAND

Put more into practice. Pass on experience.

Move a project forward. Keep experience useful to others. Bring people, AI and robots together. Three possibilities, made tangible.

ILLUSTRATION

What working together can look like.

One project. Several specialists.

An entrepreneur explores a new market. AI agents gather sources, plan next steps and examine open questions. She discusses their proposals with her team and decides on the next step.

Explore AI teams

Experience stays in play.

A founder hands over responsibility. He records his decisions, reasons and experience for the next team, including why he chose a long-standing partner. The next generation can build on these records and add fresh experience.

Pass on experience

From the screen into the world.

A workshop team plans a new task. An AI agent organises the individual steps; a robot performs one clearly defined action. People coordinate the handover and decide together how the work will proceed.

Explore people and robotics

These constructed scenes illustrate possible ways of working together.
